

Overview of available integrations

Last Modified on 08/15/2026 10:19 pm EDT

HelpOne can connect with other tools your organization already uses. Common examples include:

- Background screening (such as Checkr)
- Payment processing
- Email marketing platforms (such as Mailchimp)
- Accounting or other back-office systems

How integrations work

Integration setup is usually handled by an administrator or your HelpOne implementation partner. Once a connection is active, data can flow automatically or with minimal manual work (for example, screening results updating a volunteer record, or donations flowing from an online form).

If you need a new connection enabled or are unsure whether an integration exists for a tool you use, contact your administrator.
