

How to hide or show modules

Last Modified on 09/03/2026 1:49 pm EDT

HelpOne includes volunteers, events, fundraising, finances, HR, policies, and more. You can hide any module you are not using yet so the dashboard stays clean. Hidden modules stay in the account. You can turn them on later without a migration.

Hide a module

- Go to Settings, then Modules (or Dashboard settings).
- Find the module you are not using yet.
- Hide it or turn it off.
- Save.

That module disappears from the dashboard and main navigation for your team.

Show a module later

- Return to Settings, then Modules.
- Turn the module back on.
- Save.

Records you already have stay connected when you turn a module on.

Tip: Start with only what you need this month. Add fundraising, finances, or HR when the team is ready.
